

MSC Control Panels

Digital/Analog video routers and audio routers and Matrix switches

An exceptional range of extremely high quality products Hamlet is very pleased to offer this exceptional range of extremely high quality products. MSC is founded on high reliability and high performance. Hamlet are Master distributors in the UK and Europe (excluding Switzerland, Germany and Austria)

MSC understand the importance of remote control panels. They need to be easy to use, of the highest reliability and cost effective. MSC remote control panels operate over a standard 10BaseT Ethernet LAN. Most other switcher manufacturers either offer no remote control panels and rely solely on expensive third party control's connected to the RS232 port, one remote panel that ties up the RS232 port or some form of proprietary multi-panel interconnect scheme. Typically these proprietary systems have no isolation between control panels. If one panel fails possibly all of the panels on the network can be locked out until the failed panel is found and removed or fixed. The most popular and easy to use type of control panel is the button-per-source single bus or XY type of control panel. Operation of an XY panel is very easy. Select an output button and the currently selected input for that output is displayed as the lit input button. Pressing any other input button will now select a new input for the enabled output. MSC can provide a variety of other types of control panels, including keypad / display style and desktop configurations.

Please contact Hamlet Sales for more information

Features and functions

- Colour VGA display plus 32 button based panel with 100BaseT connectivity
- 'XY' or Single bus 10BaseT Ethernet connectivity control panels
- Remote Single bus control panels
- Up to 256 'XY' panels on the same LAN
- Up to 256 single bus panels on the same LAN
- User re-legend-able text in any switch (only on type V panels)
- 2 year warranty
